SAP Build Process Automation: The Swiss Army Knife of Automation

Versatile Tool

SAP Build Process Automation is like the Swiss Army knife of the automation world. It's packed with tools that let you create custom automations without needing to be a coding genius.

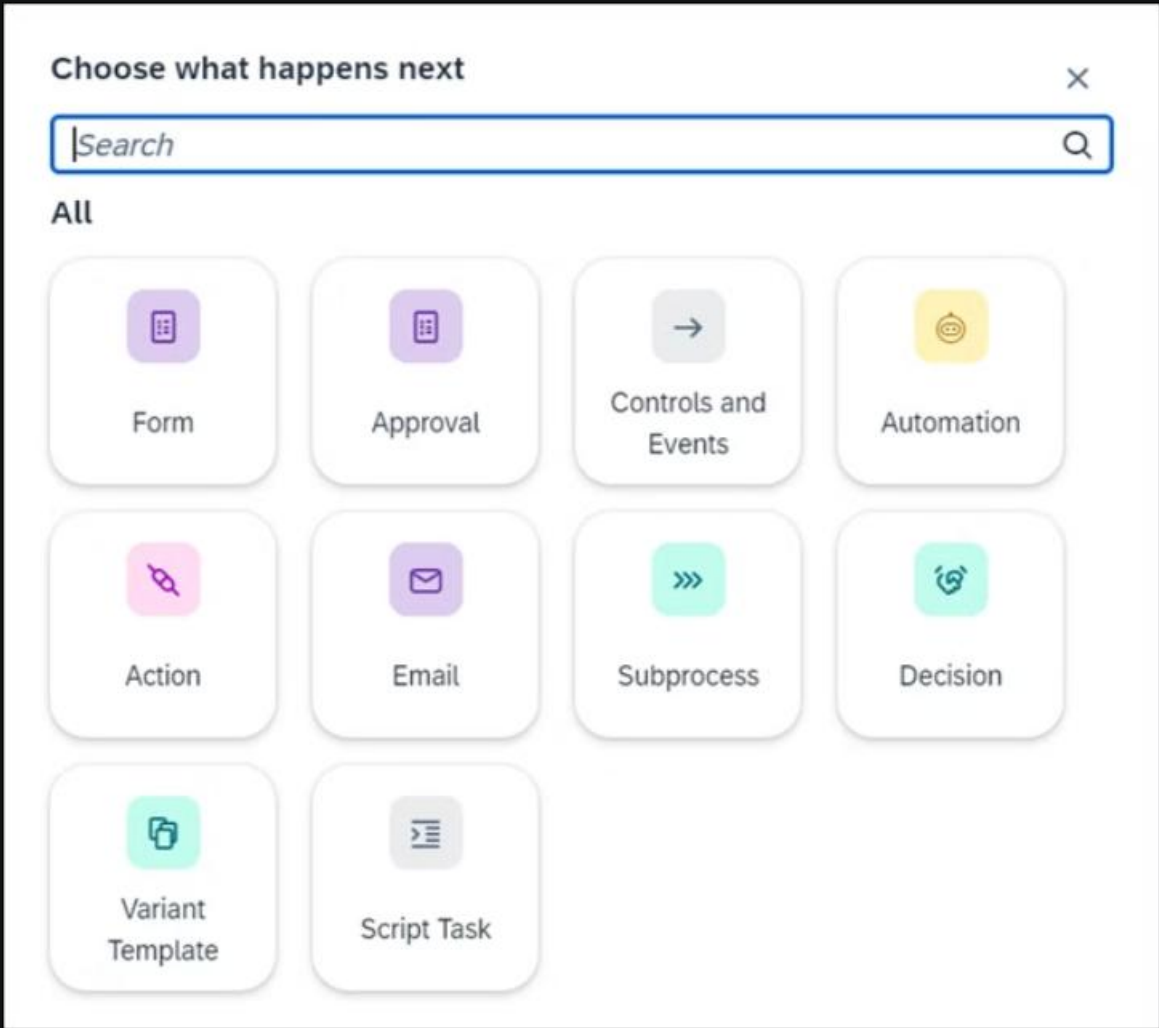

User-Friendly

Create automations using simple drag-and-drop interfaces, making it accessible to users with various technical backgrounds.

Powerful Capabilities

Combines no-code and low-code capabilities with built-in AI, enabling complex automations with ease.

Key Features of SAP Build Process Automation

No-Code and Low-Code Capabilities

Create automations using simple drag-and-drop interfaces, like building complex Lego structures just by describing what you want.

Built-in AI

Artificial Intelligence that can extract data from documents automatically, like a robot helper reading receipts and updating accounting books.

Process and Task Automation

Create workflows to guide people through complex tasks and set up "bots" to handle repetitive jobs automatically.

Automation in Action: The Superhero Cape Company

Manual Process

Without automation, order processing involves manual data entry, production coordination, inventory updates, shipping label creation, and customer communication.

1

2

Automated Workflow

With SAP Build Process Automation, create a workflow that automatically processes orders, updates inventory, generates shipping labels, and sends personalized emails to customers.

Improved Efficiency

3

Automation reduces errors, speeds up processes, and frees up the team to focus on designing awesome capes instead of doing paperwork.

Pre-built Content Packages and Bots

400+

Pre-built Packages

SAP provides over 400 pre-built process content packages and bots, like a Lego set with instructions for building 400 different cool things.

These pre-built packages accelerate automation implementation and provide inspiration for creating custom solutions tailored to your business processes.

∞

Customization Options

Use these pre-built packages as-is or customize them to fit your specific business needs, offering endless possibilities for automation.

Identifying Automation Opportunities with SAP Signavio

Process Analysis

SAP Signavio analyzes your business operations to identify inefficiencies.

Bottleneck Detection

Pinpoints areas where processes are slowing down or causing issues.

Optimization Recommendations

Suggests improvements and automation opportunities for streamlined operations.

Seamless Integration and Business Impact

Universal Integration

SAP Build Process Automation integrates seamlessly with other SAP and non-SAP systems, like a robot helper that can speak every language and work with any tool.

Business Benefits

Automation enables businesses to work smarter, reduce errors, speed up processes, and free up people to do more creative and valuable work.

Transformative Power

By leveraging automation, businesses can transform their operations, giving them the equivalent of superpowers in the digital world.

Wrapping Up: The Future of Automation in SAP BTP

1

Transforming Business Operations

Automation in SAP BTP is revolutionizing how businesses operate and innovate, making work easier and more efficient.

2

Looking Ahead

Our next lesson will explore how SAP BTP handles Integration, promising more exciting insights into business technology.

3

Think Automation

Remember, when you encounter repetitive tasks, consider how automation could revolutionize your work.
