

SAP Cloud Identity Services in BTP

SAP Cloud Identity Services is your all-in-one solution for managing users and their access to cloud applications. It's not just about logging in and out.

It handles the entire security lifecycle of your users - from onboarding to provisioning to authorization management.

What SAP Cloud Identity Services Covers

1

Onboarding New Users

Automatically creating user accounts and assigning permissions when they join your organization.

2

Provisioning Users

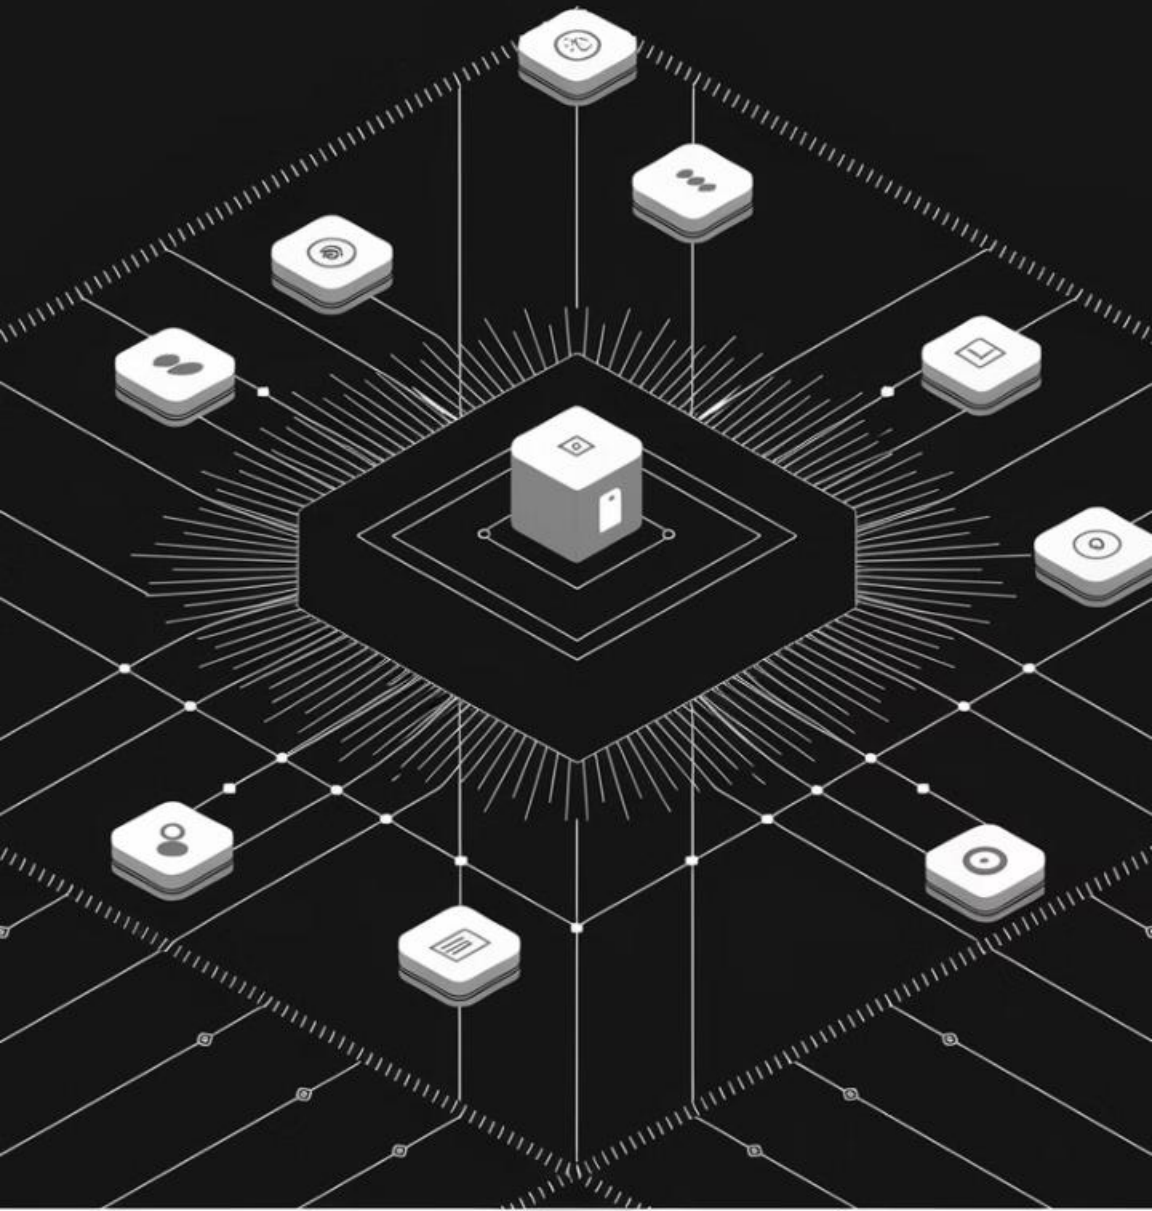

Ensuring users have access to only the applications they need to do their jobs.

3

Detecting Authorization Issues

Identifying users who might have too much access or who might be violating security policies.

Identity Authentication Service

Authentication Component

A key part of SAP Cloud Identity Services handling the authentication piece.

Single Sign-On

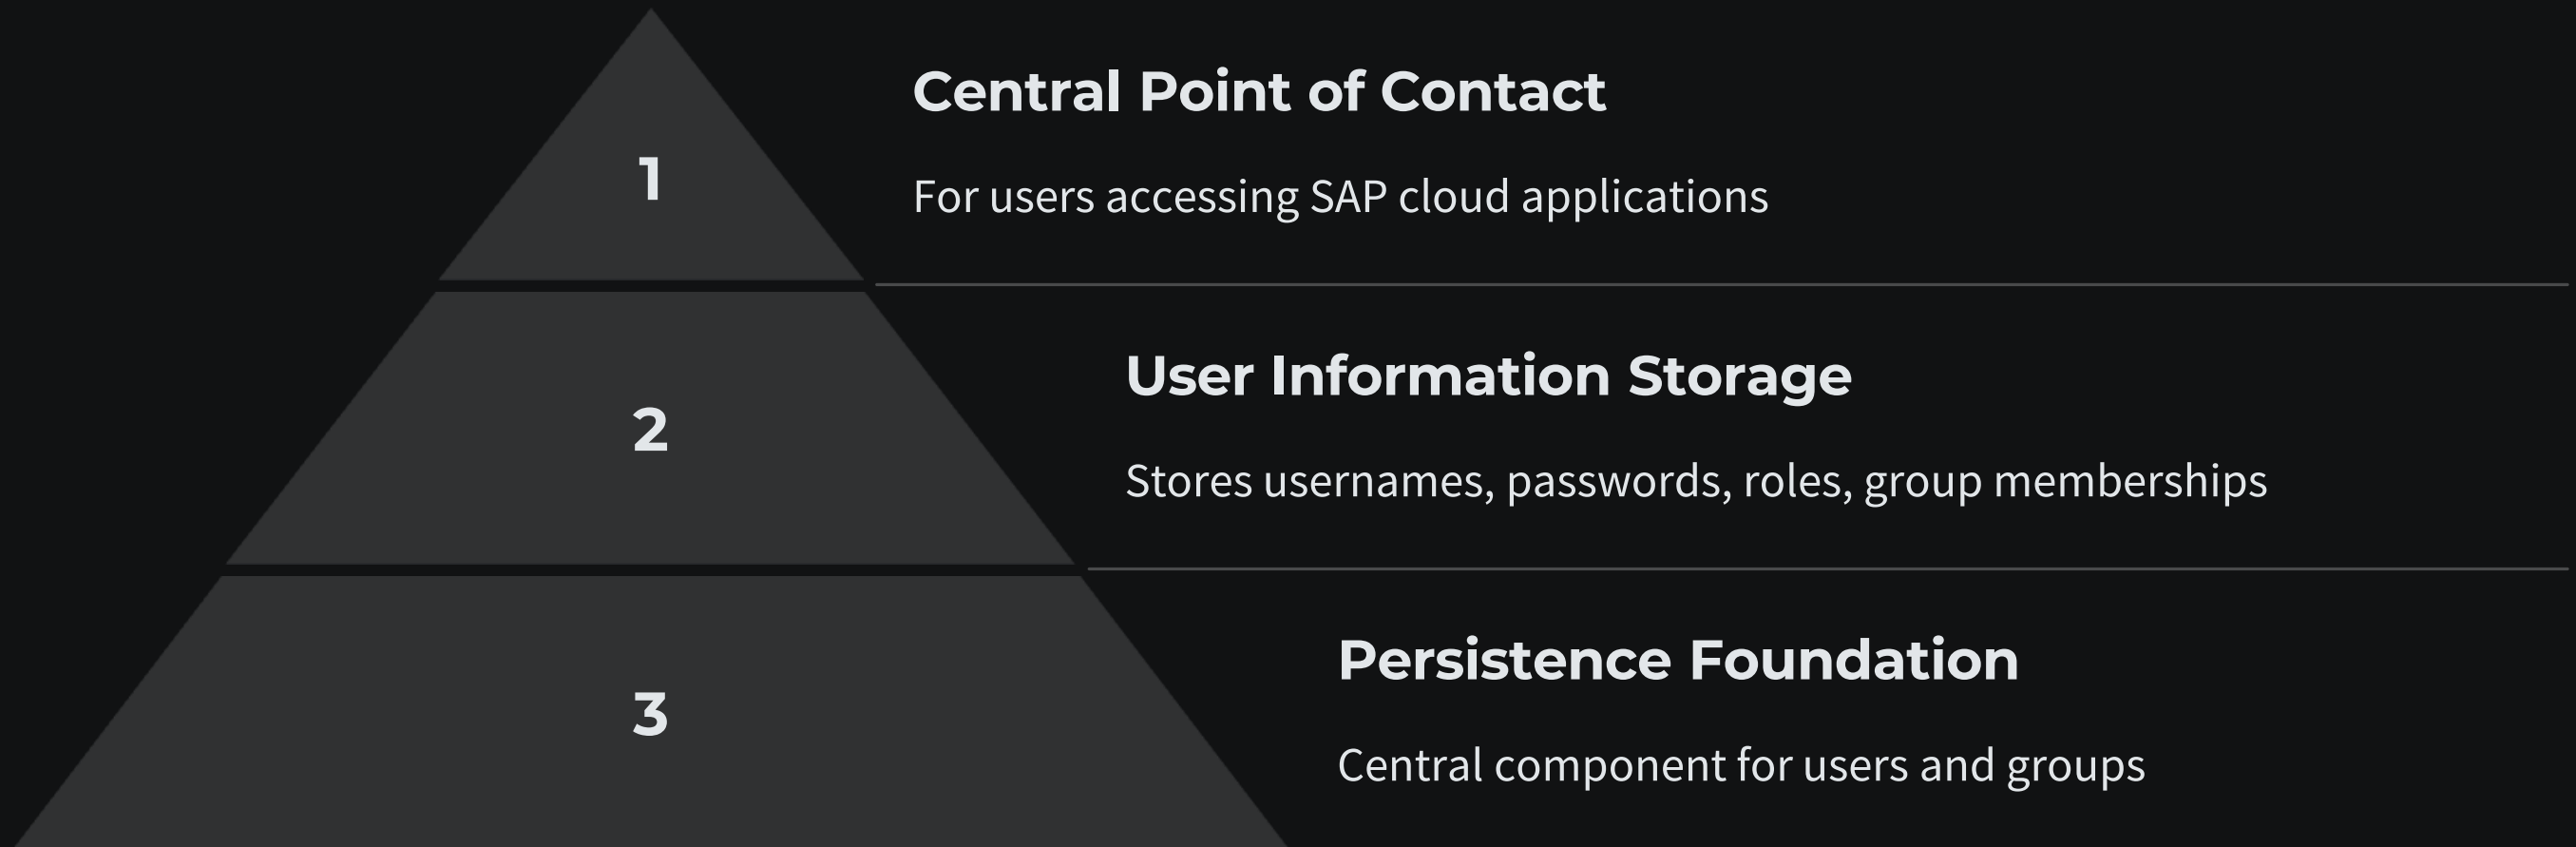

Implements SSO scenarios where users log in once to access multiple applications.

Delegation

Allows authentication delegation to third-party providers like Microsoft Azure AD or on-premise systems.

The Identity Directory

Think of the identity directory as the master address book for your organization. All SAP cloud applications reference it to determine access permissions.

Comprehensive Identity Management

SAP Cloud Identity Services makes user management more efficient and secure by providing comprehensive tools for the entire security lifecycle.
