

SAP Business Technology Platform: Exploring Capability Pillars

por Mayko Silva

Understanding SAP BTP's Capability Pillars

Strong Foundation

SAP BTP's Capability Pillars are like the strong pillars holding up the ultimate treehouse, providing a robust foundation for business solutions.

Superpowers

Each pillar brings unique capabilities, working together to create a platform that's incredibly powerful and versatile.

Seamless Collaboration

These pillars work in harmony, creating a seamless experience that can transform to meet various business needs.

Application Development: Your Digital Design Studio

Creative Hub

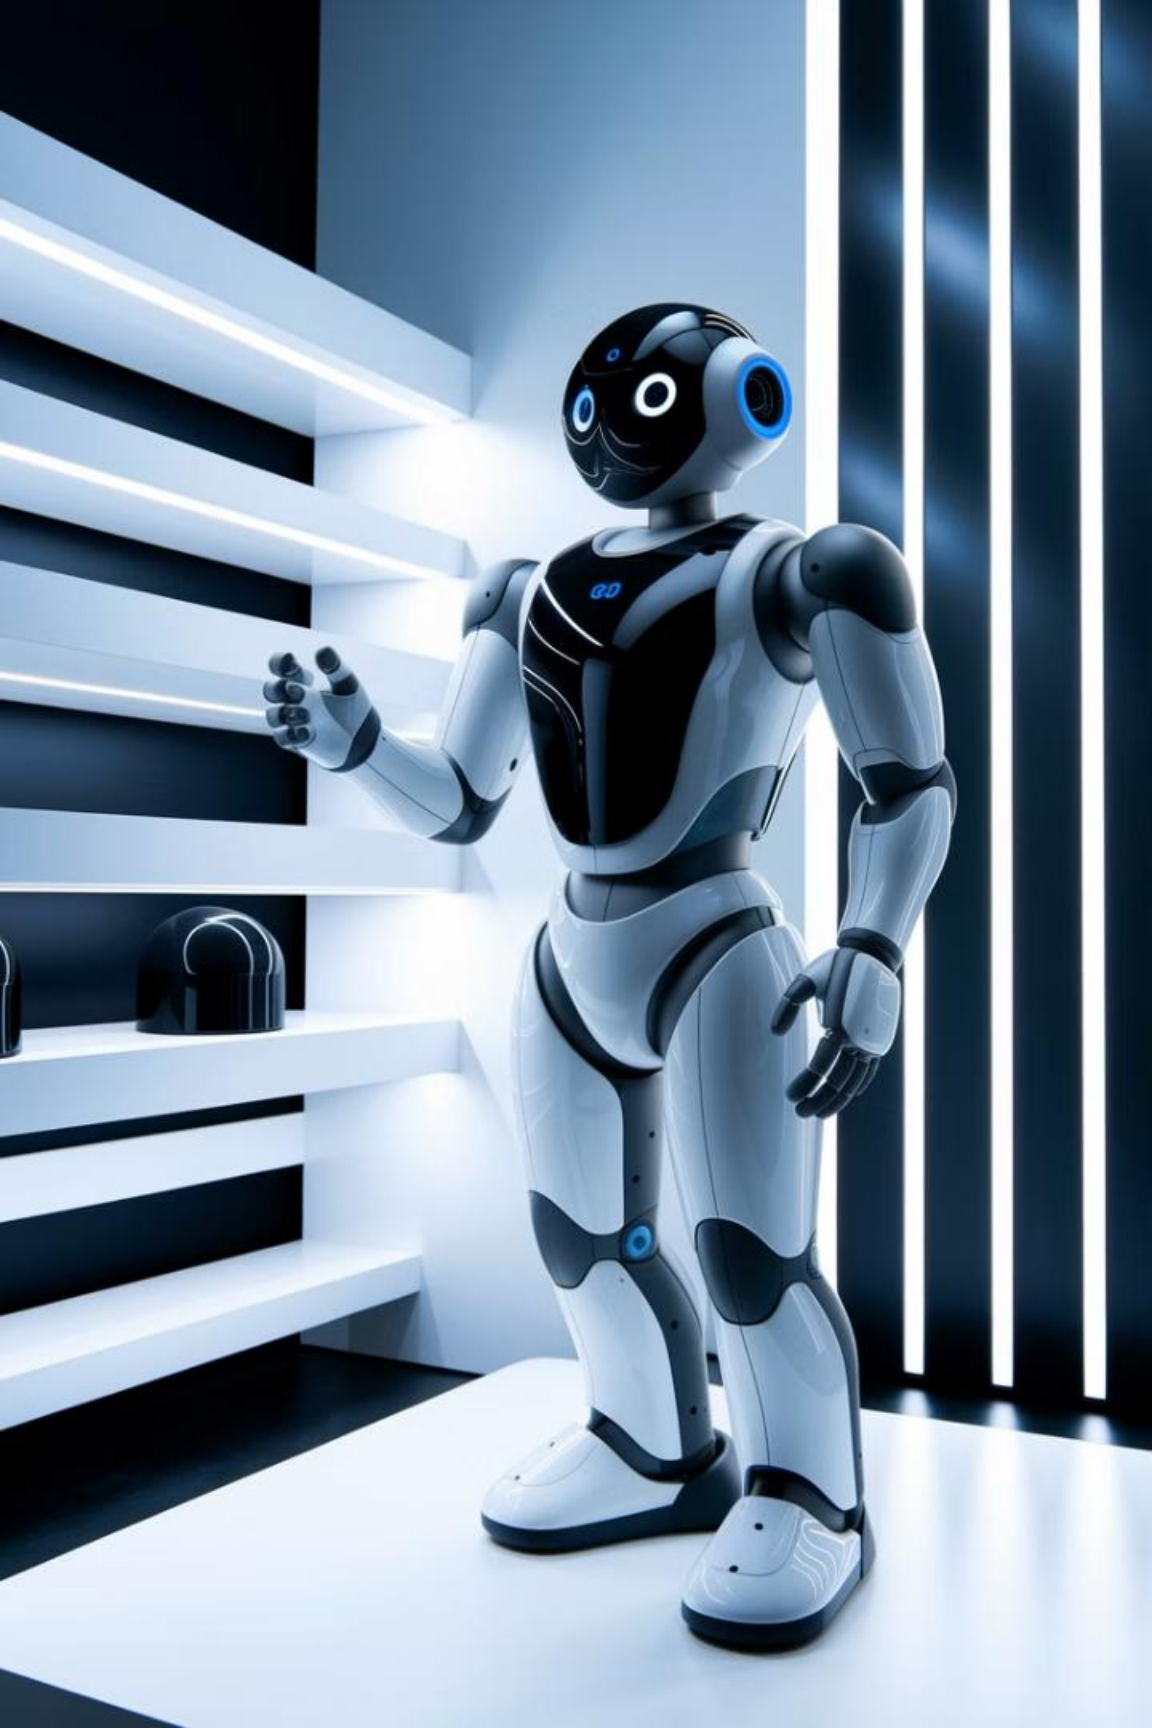

Application Development is like your treehouse's design studio, where you can bring your digital dreams to life.

App Creation

This pillar enables you to create cool apps that cater to your specific business needs and requirements.

Innovation Center

It serves as the epicenter of innovation, allowing you to turn your ideas into functional, user-friendly applications.

Automation: Your Robot Helper

1

Task Identification

Identify repetitive, time-consuming tasks that can be automated.

2

Process Design

Design efficient automated processes to handle these tasks.

3

Implementation

Implement the automated processes, freeing up time for more important work.

4

Continuous Improvement

Regularly review and optimize automated processes for better efficiency.

Integration: Connecting Your Systems

Data Flow

Enables seamless data flow between different systems.

Unified Experience

Creates a unified experience for users across different platforms.

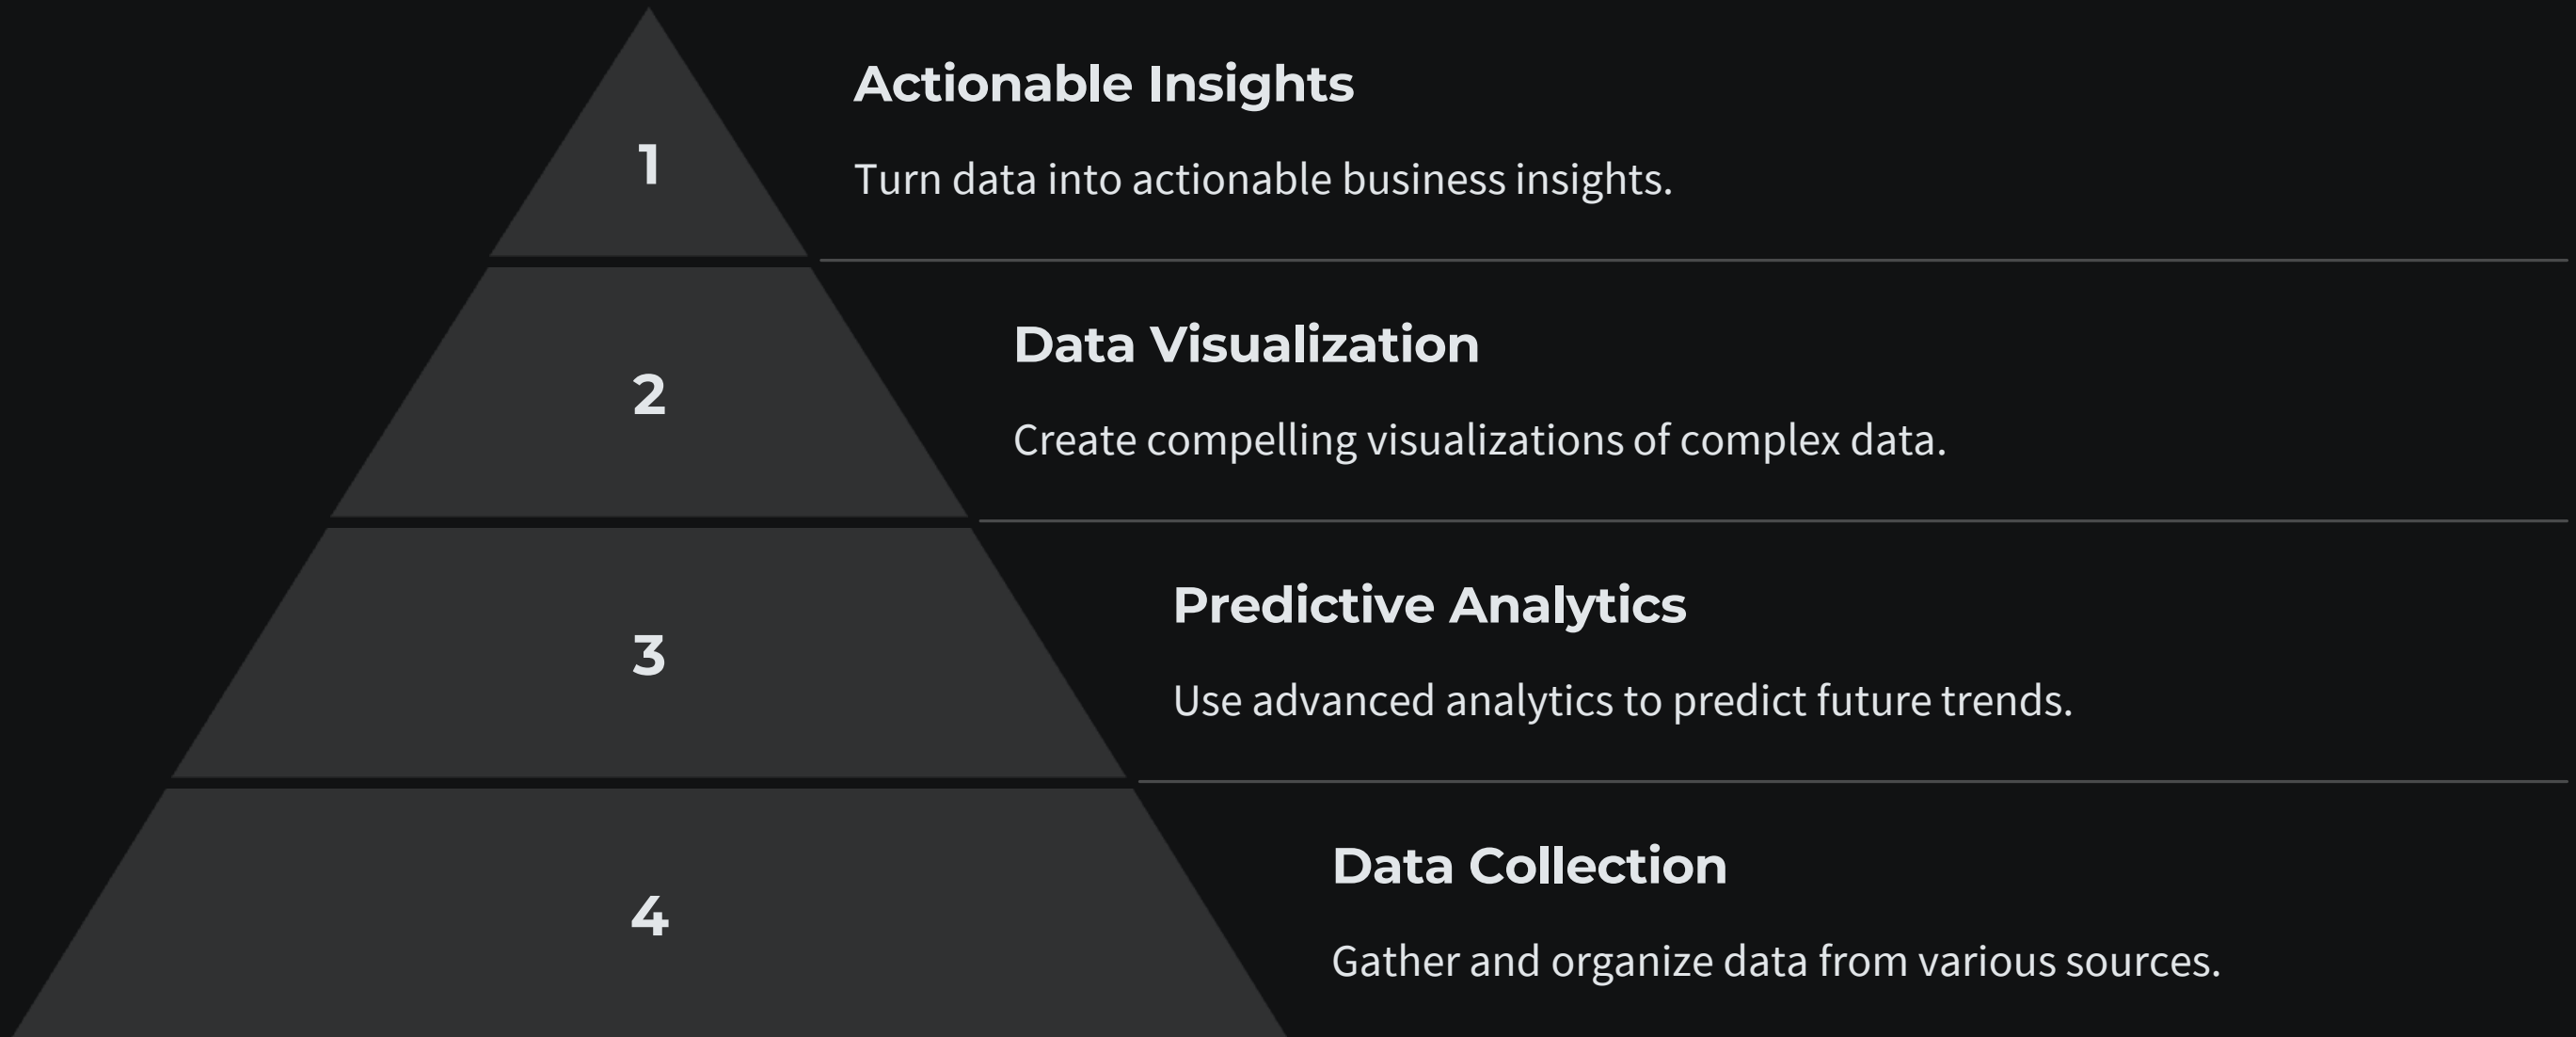

System Communication

Facilitates communication between various business applications.

Process Synchronization

Ensures business processes are synchronized across the organization.

Data and Analytics: Your Business Crystal Ball

Artificial Intelligence: Your Super-Smart Business Companion

1

Machine Learning

Implement machine learning models to automate decision-making processes.

2

Natural Language Processing

Enable systems to understand and process human language for improved interactions.

3

Predictive Analytics

Use AI to forecast trends and make data-driven predictions.

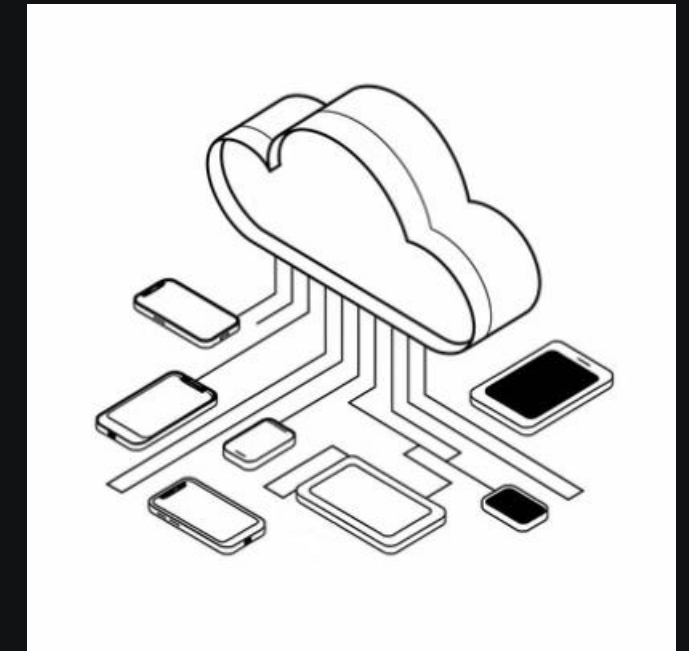

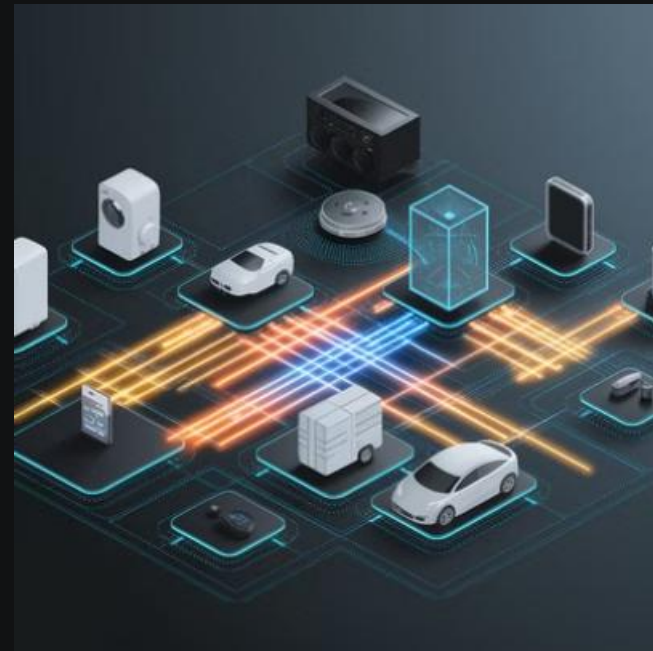

4

Intelligent Automation

Combine AI with automation for smarter, more efficient processes.

Additional Solutions: Extra Gadgets for Your Business

The Additional Solutions pillar provides extra tools and technologies to enhance your SAP BTP experience. These can include blockchain for secure transactions, Internet of Things (IoT) for connected devices, advanced security features, and cloud computing solutions. These additional capabilities allow you to customize and extend the platform to meet your specific business needs.

The Power of SAP BTP: Your Business Swiss Army Knife

1 Flexibility

SAP BTP adapts to your business needs, providing a flexible solution for various challenges.

2 Integration

The pillars work together seamlessly, creating a unified and powerful platform.

3 Innovation

With SAP BTP, you're always at the forefront of business technology innovation.

4 Scalability

As your business grows, SAP BTP grows with you, providing scalable solutions.
